

**IN THE SPECIFICATION**

Kindly amend the specification to correct informalities.

Page 2, replace the paragraph starting at line 32 with the following:

Such dispersion of pigments is obtained by using a high energy ball mill, combined with the application of a constant temperature between 35°C and 80°C, milling until an average particle size between 0.1 and 0.8 microns is obtained, and combining all of the above with a mixture of polyol acrylate ~~acrilate~~ monomers and dispersants, in order to avoid re-agglomeration of dispersing pigments.

Page 2, replace the paragraph starting at line 11 with the following:

Among bifunctional acrylic monomers, ~~Hexandiol diacrylate~~ hexanediol diacrylate, ~~Tripropyleneglycoldiacrylate~~ tripropylene glycol diacrylate, and dipropylene glycol diacrylate ~~Dipropylenglycoldiacrylate~~ will be used for this specific process.

Page 2, replace the paragraph starting at line 14 with the following:

Among trifunctional acrylic monomers, ~~ethoxylated Trimethylolpropanetriacrylate~~ ethoxylated trimethylolpropane triacrylate will be used.
